

Webinar Helps

During the webinar, if you cannot see the full screen as in the example below including the playback controls at the bottom of the screen, you must use the scroll bars on the window to scroll down. If you cannot see the full screen and to avoid scrolling, you may want to increase your screen resolution.

How to use the Playback controls

- The playback controls, consisting of a playbar and a progress bar (shown above), allow you to control the video when it is played. The playbar displays buttons that control the movement of a video. The progress bar tracks progress through the video, showing the location of the current slide. It is located at the bottom of the screen.
- Rewind replays the video starting from the first slide.
- Play/Pause allows you to pause and resume the video.
- Back returns to the previous slide.
- Forward moves to the next slide.
- The Progress bar allows you to see the progress as you move through the video. You can also move back and forth in the video by dragging the play head on the progress bar.
- Mute turns the audio off and on.
- Close/Exit will exit the video.

End of Webinar

When the video is over and the screen is blank, you can click on the Close/Exit (x) button on the playback control bar at the bottom of the screen to exit the Webinar.
